Speech processing in typical and atypical language development
6 Accurate differential diagnosis of specific language impairment (SLI) is essential to determine the optimum form and content of treatment. It is therefore important to address the cognitive processes underpinning SLI and to evaluate potential clinical markers.

language processing (Hickok and Poeppel, 2007, Rauschecker and Scott, 2009). Within the dual-stream model of speech processing, it has been suggested that the ventral stream processes speech signals for comprehension, while the dorsal stream maps acoustic speech signals to frontal lobe articulatory networks.
