Chapter 23-- Respiratory System (McGraw Hill) Flashcards ...

The system of organs involved in the acquisition of oxygen and the elimination of carbon dioxide by an organism. The respiratory system consists of a set of specialized organs, including anatomical structures and passages, that are responsible for the proper intake and exchange of oxygen and carbon dioxide between an organism's body and the environment.

Respiratory system - AccessScience from McGraw-Hill Education

When studying the respiratory system, we often divide it into the upper and lower airways. The upper airway consists of the mouth, nose, sinuses, and pharynx. The pharynx is further divided into the nasopharynx (back of the nose) and oropharynx (back of the mouth). The nose begins with the nares (nostrils) and extends back to the nasopharynx. The nasal passages are divided into right and left ...
