SQL\*Plus is the primary command-line interface to your Oracle database. You use SQL\*Plus to start up and shut down the database, set database initialization parameters, create and manage users, create and alter database objects (such as tables and indexes), insert and update data, run SQL queries, and more.

### Getting Started with Database Administration - Oracle

SQL (pronounced sequel) is the set-based, high-level declarative computer language with which all programs and users access data in an Oracle database.. Although some Oracle tools and applications mask SQL use, all database tasks are performed using SQL. Any other data access method circumvents the security built into Oracle Database and potentially compromises data security and integrity.

In Oracle Database 21c, SQL Macros solve this problem by allowing SQL expressions and table functions to be replaced by calls to stored procedures which return a string literal to be inserted in the SQL we want to execute. It's an incredibly simple concept and one that C and Rust programmers will be familiar with.
