Physical Science Using Natural Resources

When we think of sciences that relate to the environment, we often focus on life sciences. But that's only part of the picture. The physical sciences--physics, chemistry, geology, astronomy, meteorology, and so on--are important, too. Consider, for example, that neither

Science is a way to organize knowledge and understanding about the world. From the beginning, science was closely linked to philosophy and the aim was to find reliable and logical explanations to things that were observed or predicted. Today, science is often divided into natural science and physical science.
