Piecewise functions graphs | Algebra (practice) | Khan Academy

Question: Graph the following piecewise function and evaluate for the given values of x .
 $f(x) = \begin{cases} -x + 6 & x < 2 \\ x^2 - 9 & x \geq 2 \end{cases}$
4 : for $x < 2$:
4 : for $x \geq 2$: Answer: ...

This function is called the signum function and is usually written $\text{sgn}(x)$. Rewrite the rule for $\text{sgn}(x)$ using piecewise notation.

Get Free Piecewise Function Practice With Answers

Piecewise functions (or piece-wise functions) are just what they are named: pieces of different functions (sub-functions) all on one graph. The easiest way to think of them is if you drew more than one function on a graph, and you just erased parts of the functions where they aren't supposed to be (along the (x) 's); they are defined differently for different intervals
