Piled Raft Foundation International Journal

A piled raft foundation is economical as compared to the pile foundation because piles in the case do not have to penetrate to the full depth of clay layer but it can be terminated at higher

elevation. Piled raft foundations have been used successfully in Germany and other place where thick clay deposits exist over large depth. II.LITERATURE REVIEW

PILED- RAFT FOUNDATION FOR HIGH RISE INDUSTRIAL STRUCTURE

A piled raft foundation comprises both piles and a pile cap that itself transmits load directly to the ground. The aim of such a foundation is to reduce the number of piles compared with a more conventional piled foundation where the bearing effect of the pile cap, or raft, is ignored. This paper describes a 'hybrid' approach for the analysis of piled raft foundations, based on a load transfer treatment of individual piles, together with elastic interaction between different piles and ...

Pile raft foundation behavior is evaluated with many researches and the effect of pile length; pile distance, pile arrangement and cap thickness are determined under vertical or horizontal static and dynamic loading. In the present paper the influence of pile length configurations on behavior of multi-storied are evaluated under vertical loading.

The geometric details of the problem are described in Fig. 2. Consider a piled-raft foundation over a uniform soil layer that supports a superstructure as shown in Fig. 2(a). The foundation contains an $A \times B$ rigid raft in plan founded at depth D below the ground surface, overlaying the soil mass reinforced by a group of vertical piles with length L . The cross-section area of the piles is a ...

The combined pile-raft foundation (CPRF) has been widely recognized as economic and rational foundation for high-rise buildings when subjected to vertical loading because of its effectiveness in load sharing by both raft and pile components. This results in smaller total and differential settlements with a reduced number of piles as compared with group piles.
