We could modify the Merge Sort algorithm to count the number of inversions in the array. The key point is that if we find  $L[i] > R[j]$ , then each element of  $L[i:]$  (represent the subarray from  $L[i]$ ) would be as an inversion with  $R[j]$ , since array  $L$  is sorted. COUNTING-INVERSIONS and INTER-INVERSIONS shows the pseudo-code of this algorithm.
