In mathematics, an integral assigns numbers to functions in a way that can describe displacement, area, volume, and other concepts that arise by combining infinitesimal data. The process of finding integrals is called integration. Along with differentiation,

Integration theory on the real line can be motivated in a number of ways. Many presentations start with the ancient Greeks and their study of the method of exhaustion to calculate areas. That then transitions into discussions of Riemann sums and an account of the Riemann integral.

The Integral Development Model: The 4Rs of Integral Development. The four main elements of the Integral Development approach, drawing from our overall 'Integral Worlds' approach, are what we called the '4Rs': Realities, Realms, Rounds and Rhythms. These four constituents are dynamically and interactively interwoven.
